

INSTALLATION INSTRUCTIONS FOR WINDSHIELD WRAPS

STEP 1 Open front driver and passenger doors and spread wrap across windshield.

STEP 2 Align top and bottom evenly from both sides of windshield. Position the top of wrap flush to top windshield molding. Position evenly from side to side so wrap is centered on windshield.

STEP 3 From inside vehicle seated in passenger's front seat, stretch elastic strap over rearview mirror.

STEP 4 Repeat STEP 3 with driver side elastic band.
NOTE: To avoid a difficult tangle when removing, always un-strap the driver side first.

STEP 5 After strapping wrap to rearview mirror from inside vehicle, adjust wrap on windshield outside vehicle to remove any curls and unevenness.

STEP 6 If necessary, lift windshield wipers and evenly position wrap underneath. Close both doors to secure wrap into position.
